Disinfection Test Kit

For Chlorine & Hydrogen Peroxide

Delivering simplicity and affordability through innovation.

The DTK Disinfection Test Kit should be used in all applications where a system water disinfection is being carried out to ensure full compliance with current regulations.

The kit allows the determination of Chlorine and Hydrogen Peroxide at Low & High levels which are both required during a system disinfection.

High levels of disinfectant need to be monitored during the procedure to ensure that sufficient disinfectant has been achieved at the tank and all subsequent outlets.

Low levels need to be monitored to ensure that (if appropriate) the system has been fully flushed to remove all disinfectants and the system water is back to the same as mains water quality.

At all times the levels must be recorded to ensure full compliance with disinfection standards.

Simple to use

Chlorine is measured using the comparator at both Low & High levels.

Hydrogen Peroxide is measured at the tank initially with the drop test and then for speed using test strips at each of the outlets.

The complete kit includes :

- Plastic case with foam
- Waterproof test booklet
- Comparator & 4 x 10ml test cells
- pH stick meter
- 65ml test bottle
- Crushing Rod & Cell cleaning brush
- 20ml syringe
- Chlorine LR disk (0 - 4 ppm)
- Chlorine HR disk (10 - 300 ppm)
- Hydrogen Peroxide test strips (0 - 100 ppm)
- Hydrogen Peroxide drop test (0 - 5000 ppm)
- DPD No1 tablets (50)
- DPD No3 tablets (50)
- HP1 Peroxide buffer (65ml)
- HP2 Peroxide HR titrant (65ml)
- HP3 Peroxide LR titrant (65ml)
