Drop Test Kits

For use in a range of Water Systems

Delivering simplicity and affordability through innovation.

The DTK range of drop test kits are designed for use on a wide range of water systems where routine site monitoring is required.

The DTK kit should be used to monitor water conditions to ensure that the systems are under control and do not exhibit signs of corrosion, scaling or microbiological fouling. Many are designed to allow the simple determination of inhibitor or biocide levels.

Each test kit has all the components required to carry out site analysis. All are supplied in a robust carry case with all the equipment and reagents necessary to perform between 100 and 200 tests.

If you require more than one parameter in a kit we can accommodate this request and multiples can be included.

Replacement reagents and components are available which make this kit a lasting addition to any water treatment professional.

Simple to use

Our test instruction booklet is in full colour and has easy to follow step by step instructions making on site analysis simple.

The reagent labels and test booklet are printed on waterproof and chemical resistant paper making them more durable.

Drop Test Kit Parameters

Acidity, p Alkalinity, M Alkalinity, OH Alkalinity, Anionics, Bromine Total, Chelant free, Chelant Total, Chloride, Chlorine Free, Chlorine Dioxide, Hardness Total, Hardness Calcium, Hardness Stop/Go & Yes/No, Hydrogen Peroxide, Isothiazolone, Sodium Hypochlorite, Iron VHR, Molybdate, Nitrite, Peracetic Acid, pH, Phosphonate, Polyacrylate, Polyamine, QAC (Quaternary Ammonium Compounds), Sulphite, Tannin, THPS, Total Oxidant, Zinc

Each kit includes :

Plastic case with pre-cut foam
Waterproof test booklet
65ml test bottle
10ml or 20ml syringe
Test reagents in 65ml bottles
