Legionella Compliance Test Kits

For Cooling Towers & Water Features

Delivering simplicity and affordability through innovation.

The DTK Legionella Compliance kits for monthly or weekly analysis are designed for use on all types of Cooling Towers, Water Features and any other water system that presents a legionella risk.

Water systems with a legionella risk require careful test monitoring to ensure the correct water conditions are achieved to reduce the risk of Legionella. Failure to keep the system under control can lead to scale, corrosion and the growth of the potentially fatal Legionella bacteria.

The tests typically undertaken for weekly analysis are pH, Conductivity, oxidising biocide and microbiological activity using a dipslide incubated at 30°C. (See additional data sheets)

Additional tests for monthly analysis are Alkalinity, Hardness, Chloride, Iron and if requested Phosphonate, Sulphate.

Our legionella compliance kits are supplied in a robust carry case and include all the equipment and reagents necessary to perform between 50 and 100 tests.

Simple to use

Our test instruction booklet is in full colour and has easy to follow step by step instructions making on site analysis simple.

The reagent labels and test booklet are printed on waterproof and chemical resistant material making them very durable.

The weekly kit includes :

- Plastic case with foam
- Waterproof test booklet
- pH strips (or pH meter with buffer solution)
- Conductivity meter with standard solution
- Bromine disk and reagents (0 - 5 ppm)
- Hardness Stop/Go solution (0 - 4ppm)
- Comparator, 10ml test cells & test tube

The monthly kit includes the above PLUS :

- 65ml test bottles, tablet crusher & cell cleaning brush with 10ml & 20ml syringes
- Iron LR disk & reagents (0 - 1 ppm)
- Alkalinity M drop test (0 - 2400 ppm)
- Total Hardness drop test (0 - 1200 ppm)
- Calcium Hardness drop test (0 - 1200 ppm)
- Chloride drop test (0 - 3000 ppm)
- (If requested Phosphonate & Sulphate)
