Universal Rapid Legionella Test Kit

For all types of Waters - Cooling Towers, Hot & Cold Water Systems, Showers

Delivering simplicity and affordability through innovation.

The Universal Rapid Legionella Test Kit is a breakthrough in technology for the on site rapid detection of Legionella pneumophila serogroup 1.

The Universal Rapid Legionella Test Kit uses an immunochromatographic assay to detect within 30 minutes the presence of cell surface antigens from Legionella pneumophila serogroup 1.

The presence of the antigen in the water causes the "Test Line" to turn red in colour. A "Control Line" is included which should always turn red if the test has been performed correctly.

The kit includes 5 tests and has been designed to test waters to a sensitivity of 100 CFU/L. It is ideal when access to laboratories is impractical or speed is imperative.

It should be used to supplement your existing sampling programme and should not replace routine laboratory analysis.

Order codes

- LTK0050F-Universal Test Kit inc filtration
- LTK0050 - Universal Rapid Legionella Test Kit
- LTK0060 - Universal Filtration Accessory Pack
- LTK0070 - Legionella Test Cell
- LTK0080 - Legionella Filter
- LTK0090 - Legionella Syringe
- LTK0100 - Legionella Filtration Tube

First time users should purchase LTK0050F.

For further tests purchase LTK0050 or single components.

Take water sample

Draw through filter

Add to test cell

LTK0050F complete kit includes :

- Plastic case with instructions
- 1 x Universal Filtration Accessory Pack
- 1 x 250 ml Sample Bottle
- 5 x LTK 0070 - Legionella Test Cell
- 5 x LTK 0080 - Legionella Filter
- 5 x LTK 0090 - Legionella Syringe
- 5 x LTK 0100 - Legionella Filtration Tube
