Dear Customer

Our Statement of Reach Compliance

The EU legislation No. 1907/2006 or REACH regulations (Registration, Evaluation, Authorisation and restriction of Chemicals) came into effect on the 1st June 2007.

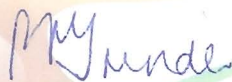

The main objectives of the regulations are to ensure that chemical substances used within the EU are properly assessed for their safety to both humans and the environment and where appropriate the use of some substances may be restricted or prohibited.

Registration is required for all substances and preparations which are manufactured or imported in volumes of 1 tonne or more per annum in the EU member states under this new legislation.

DTK (droptestkits.com Ltd) would like to confirm its position as the chemicals and solutions manufactured and marketed by us are produced from materials sourced within the EU. This places DTK (droptestkits.com Ltd) in the REACH supply chain as a "Downstream User" rather than as a "Manufacturer or Importer" of products.

As far as we know all chemicals are in the registration process of our suppliers so all delivered substances will be registered to the requirements of the REACH directive.

We are confident we will be able to supply every existing DTK (droptestkits.com Ltd) product in the future and can confirm that no products contain Substances of Very High Concern (SVHC).

P.J. Trinder
